PREFACE

CANSIM* is Statistics Canada's computerized data banks and information retrieval service. Statistics Canada maintains the complete Time Series database and software at a commercial service bureau to ensure timely access from anywhere in Canada by dial-up terminal. The Time Series database provides detailed and timely statistical information to data users in both the private and public sectors.

In addition to the central facility maintained by Statistics Canada, a standardized subset of the CANSIM Main Base known as the CANSIM Mini Base is distributed by Secondary Distributors under license to Statistics Canada.

The Table of Contents and Index A and B of this volume serve to identify, at a fairly aggregate level, the content of the CANSIM Main Base. The Main Base contains a wide variety of data relating to such topics as the System of National Accounts, Labour, Manufacturing, Construction, Trade, Agriculture and Finance. As well, selected demographic and social data such as population estimates and vital statistics are available.

The Table of Contents may be used to discover the full range of CANSIM data holdings. For each section a cross reference list follows the content. The cross reference points to related or similar data residing elsewhere within the Main Base and in the Cross Classified and Summary Data Bases. To further assist users with questions on the actual data stored on the time series database, a list of phone numbers appears in each section.

The CANSIM Time Series Base is one of several database systems administered by the Electronic Data Dissemination Division (formerly CANSIM Division). Business, economic and social statistics are available in cross-sectional format on the Cross-Classified Base (XCL); this format shows data in their multi-dimensional relationship with other data over time. Census Summary Data for a variety of geographic areas are available on the CANSIM Summary Data System (CSDS).

* CANSIM is an Official Mark of Statistics Canada.

GUIDE TO USE OF THE TABLE OF CONTENTS, INDEXES, APPENDICES, AND DIRECTORY

An intrinsic property of the Time Series Main Base is that the data are organized according to a hierarchical structure - the highest level of which is the data matrix. Each of the approximately 6,000 matrices on the database contains individual series, which are related to each other in some coherent fashion. Each series represents a concept or variable for which data are stored across time.

The Main Base Series Directory, the large-volume, series level presentation of the database content, has as its primary level of aggregation the data matrix. Within it, matrices are simply ordered in ascending sequence and not placed in the context of subject matter categories. The Main Base Series Directory outlines, for each matrix, the Matrix Title and Note and, when applicable, the source publication for the data. For each constituent series, it provides the CANSIM series identification number, the databank number, start date, security status and termination and metric conversion indicators-all in a format designed for easy reference.

The Table of Contents contains a brief description and summary listing of the contents of each of the subject matter sections. As well, it provides cross references to Index B and additional sources within the CANSIM system for related data.

Index A is a subject index to the matrices which comprise the CANSIM Time Series Main Base. Throughout, main topics are ordered in alphabetic sequence, with sub-groupings such as geography, industry, or commodity breakdowns indented for easy reference. The users should note that investigation of these sub-groups, in addition to the main alphabetic citations, should provide substantial references for a given topic or group of topics. For example, direct citations exist for GRAIN, but this item may also be found as a component of major topics such as Balance Sheet data and Concentration by Control statistics. In the development of this index, an attempt has been made to extract essential keywords from the matrix titles, as well as to offer, in some instances, a broad indication of series-level content. Users are cautioned not to rely totally on this Index, however, and should also refer to the structured, survey/collection oriented Index B. Further, due to its experimental nature, there will be room for improvement. Comments or suggestions about items not referenced or about the over-all design of the Index, are welcome.

Index B outlines the contents of the Directory by these matrices-specifically, as they are organized by broad subject categories. The link between the Index and the Main Base Series Directory is the matrix number.

To determine whether data of interest are contained in the CANSIM Main Base, the user is encouraged to begin with a review of the Table of Contents and Index A. If these provide evidence that data of interest may be available, the user is directed to the pages of Index B which outline the matrices that might apply. Subsequently, matrices which are identified as warranting investigation of their component time series would form the basis for referring to the CANSIM Main Base Series Directory.

Appendix A is an Inquiries List. Inevitably, questions will arise about the actual data stored on the time series database; questions about terminology, survey coverage, revision procedures, structural consistency, and so on. Such inquiries are, in most cases, best answered by the staff who actually conduct the surveys and produce the statistics.

Appendix B provides ranges, by subject or by source/publication, of the Databank Numbers that have been assigned to the time series on the database; as well, a tally of the number of series within each range is given.

Appendix C lists publications, containing similar data, and references to methodology, and refers the user to the appropriate page(s) of this document.

For information on the CANSIM Database System, and the services provided for its implementation and dissemination, please contact a User Services Representative in your nearest Statistics Canada Regional Office, or, alternatively, the Applications Consulting Services Section of the Electronic Data Dissemination Division, Statistics Canada, Ottawa:Telephone (613) 990-8200.

TABLE OF CONTENTS

A. SYSTEM OF NATIONAL ACCOUNTS

The System of National Accounts provides a conceptually integrated framework for the systematic recording of activities within the Canadian economy.

The System consists of several parts. The Income and Expenditure Accounts provide a basic statistical picture of the key economic processes of production, income generation, sales to major markets, consumption, and capital formation. The Balance of International Payments data in their aggregate form constitute another part of the System of National Accounts. Structural details regarding industries and goods and services in current and constant dollars are portrayed in the Input-Output Tables of the system. Another part, Gross Domestic Product, provides constant dollar measures of the contribution of each industry to total Gross Domestic Product at factor cost. Aggregate productivity measures relate inputs to outputs, and the Financial Flow Accounts comprise the aggregate records of financial transactions.

Industry Measures and Analysis brings together selective indicators for evaluating the course and pattern of economic developments in Canada, and for comparing changes in these patterns between Canada and the United States.

B. PRICES AND PRICE INDEXES

This section presents several measures of price levels and price movements. The most familiar item is the Consumer Price Index which is a measure of percentage change through time of the cost of a constant basket of goods and services representing the purchases made by a subset of the population in a specified time period. Also included in this section are the Industry Price Indexes for twenty major industries in the manufacturing sector. Construction Price Statistics contain price indexes of inputs into construction, contractors selling prices and special purpose aggregations of price indexes for construction machinery and equipment relating to specified categories of capital expenditures. Some specific price indexes are also presented as part of this section. The references point to other sections containing additional specific price indexes.

C. LABOUR and INCOME

This section contains statistics on Employment, Unemployment, Labour Force Activity and Labour Income. The data originate from various sources. From a sample of approximately 51,000 households, the Labour Force Survey provides basic labour force characteristics data by sex, age, marital status and geographical areas. The Survey of Employment, Payroll and Hours, a mail survey of firms, institutions and organizations of all sizes, measures the levels and changes in employment, paid hours and earnings. These statistics are available at detailed industrial and geographic levels. The rest of the section contains statistics derived primarily from administrative sources and covers such topics as labour income, wage developments from collective agreements, government employment, and unemployment insurance statistics.

D. INDUSTRIES

This section contains measures of Industrial Production Activities from the Census of Manufacturers and includes items such as value of shipments and orders, employment, wages, and the cost of materials and supplies. Details are provided here for individual manufacturing industries as identified by the Standard Industrial Classification System, and are available at the Canada, region, and province level.

Some production data are also provided. These include motor vehicles, refinery products, gas and utilities.

The results from the Survey of Retail Trade are presented here and include values of sales of goods by industry (S.I.C.) for Canada, values of sales of goods for some types of retail business by province, and department store sales and stocks by departments at the Canada level.

Also included in this section are the associated subjects of summary statistics on direct selling, values of inventories of wholesale trade, merchandising inventories and sales figures of new motor vehicles.

E. CAPITAL AND FINANCE

This section provides data on the Financial Transactions of Industrial Corporations by size and industry as reflected on the balance sheets and statements of income, retained earnings, investments and capital expenditures. Statistics are derived from a quarterly survey of financial statements. Similar financial statistics covering Financial Institutions are also included in this section. Data on taxable income, income taxes and selected capital cost allowances for corporations are available for 37 major industries. There are also data on Government Finance, Employment and Payrolls.

Statistics derived from the application of the Corporations and Labour Union Returns Act (CALURA) include information on major financial characteristics, degree of concentration and foreign control.

For the first time, this section also contains the statistics used in the preparations of the Bank of Canada Review, mostly made up of data series on activities of financial institutions and financial markets and some general economic and international statistics.

F. SCIENCE, TECHNOLOGY & CAPITAL STOCK

Construction statistics cover a wide spectrum of data, from the measure of output of the construction industry at its most aggregate level (National Wealth and Capital Stock) on through to its inputs (building materials) at a more detailed level. National Wealth and Capital Stock includes annual estimates of the stocks and flows of fixed non-residential capital in Canada, by major industries both in constant and current dollar valuation. Capacity Utilization Rates in manufacturing comparing output with capacity are available by major S.I.C. industry groups. Annual estimates of Capital and Repair Expenditures on construction for up to 70 different structure types, by province and industrial sector, are included. The results of the Investment Intentions Survey from about 24,000 respondents in Canadian businesses, institutions and governments provide the estimates for total outlays for construction and for acquisition of producers' machinery and equipment. Housing starts, building permits and shipments of building materials complete the offering.

K. POPULATION

This section is made up of various Population Projections and Estimates, Vital Statistics and Immigration Data. Using different hypotheses regarding future and demographic trends, four series of population projections for Canada and the provinces are presented for the year 1976 to 2001. Also included are historical data from the Census of Population for census divisions and subdivisions. Current population estimates, immigration data, vital statistics, revised annual population estimates, interprovincial migration estimates and population for census metropolitan areas for 1976 to present complete this section.

L. SELECTED OTHER STATISTICS

This section contains a selection of the data produced by the United States Departments of Commerce and Labor and by the provincial statistical offices of Alberta and Québec, and other data not listed elsewhere such as Crime Statistics. For the provinces of Alberta and Quebec the data cover a broad range of measures of economic and social activities and characteristics within their respective borders.

Macro economic indicators for the United States including G.N.P., C.P.I., and Labor Force Activity, obtained from the U.S. Department of Commerce publication Survey of Current Business, are presented in this section. In addition, business indicators for the U.S. are available; they are obtained from the U.S. Department of Labor publication Business Conditions Digest.

Annual Historical Indexes of Real Domestic Product by Industry, 1971=100..	389*
--	------

To obtain a continuous record on a 1971 base for industries not included in matrix 389, the index on a 1961 base must be mechanically rebased to 1971 by multiplying by 100 and dividing by the 1971 index value on a 1961 base. For 1971 and earlier years, Real Domestic Product, the Index of Industrial Production and the component indexes required for linking to the 1971 based series may be obtained from the following Statistics Canada publications:

Real Domestic Product by Industry, 1961 Base, (61-506), Occasional - for Real Domestic Product for the period 1935 to 1960 and for the Index of Industrial Production for the period from 1919 to 1960.

B. PRICES AND PRICE INDEXES

A. CONSUMER PRICE INDEX - Updating Based on 1982 Expenditures

Beginning with January 1985 the Consumer Price Index (CPI) will be compiled using updated weights obtained from the 1982 Family Expenditure Survey. These weights will replace those derived from the 1978 Survey which were used in the CPI during the period April 1982 to December 1984.

To maintain the continuity of the series for the All-Items index for Canada and for published urban centres as well as for other indexes representing varying levels of aggregation, the indexes produced using the 1982 weights are linked (or chained) to their respective counterparts obtained from the 1978 weights. December 1984 marks the link month, or the point in time, in which comparable indexes are merged.

The time reference base continues to be 1981=100 except in cases of indexes that were initiated after that time. In particular, indexes for Whitehorse and Yellowknife will continue to be reported on a March 1982=100 time base. Victoria, the newest urban centre for which data will be published, will have a time base of December 1984=100.

Further details on the Consumer Price Index and related information may be obtained by dialling 613-990-9606 or by writing to the Unit head, Information and Current Analysis Unit,

Information on major wage settlements is obtained from collective agreements settled in Canada during the quarter and covering 500 or more employees. The construction industry is excluded prior to 1983. The level of increase pertains to the base rate and includes estimated cost of living allowance (COLA) payments which are quantified by applying actual and/or projected increases in the Consumer Price Index to each COLA clause. D. INDUSTRIES

A. General Review of the Manufacturing Industries of Canada, Terminated, Canada only
(31-203), Annual, 1961-1971 (1960 S.I.C.)

The concepts and definitions used are available upon request from the Regional Statistics Section Industry Division.

Manufacturing industry data available in CANSIM have been compiled according to the criteria of the 1969 Census of Manufactures. Certain head offices which in earlier years have been classified at the industry group level have over time been included with those head offices classified at the individual industry level. Beginning with 1970, all head offices are classified at the industry level.

Series starting with a "5" have been combined for all years with the corresponding industries in the series which begin with a "3". S.I.C. 107 is combined with S.I.C. 105. S.I.C.'s 1011, 1012 and 1013 are combined into S.I.C. 101. S.I.C.'s 1391 and 1392 are combined into S.I.C. 139. S.I.C. 3993 is combined with S.I.C. 3999.

The S.I.C. codes have been built into the series number in all cases.

Part I - Corporations

Major Financial Characteristics (sales, assets, equity, profits, and taxable income), and enterprise and corporation counts, for leading enterprises and totals, by control, by industry for each of the years from 1975, based on Table 1 and 6 in the published catalogue.

An enterprise is defined as a set of corporations under common control. Further information on the concepts and definitions used are available in the published catalogue, or may be obtained upon request from the Corporations Section, CALURA-Industrial Organization & Finance Division. Detailed information on the corporations in specific enterprises may be found in Inter-corporate Ownership (catalogue 61-517 occasional).

- The first set of matrices shows aggregate concentration (the leading 25, 100 and 500 enterprises) and the impact of foreign controlled, Canadian private, and Canadian government enterprises. Leading enterprises were determined by aggregating sales of subsidiary corporations in non-financial industries. The impact of these leading enterprises within each of the nine industry divisions is also shown.

F. SCIENCE, TECHNOLOGY AND CAPITAL STOCK

A. National Wealth and Capital Stock

1. 1970 SIC

These series represent annual estimates of the stocks and flows of fixed non-residential capital in Canada beginning with the year 1926. The data from 1926 are published in Fixed Capital Flows and Stocks, (13-568), occasional. Updates for the five most recent years are published in Fixed Capital Flows and Stocks, (13-211), annual.

The perpetual inventory method which underlies the present estimates starts with annual investment expenditures and estimates of the service lives of the assets. The capital stock estimates for a given year are obtained by accumulating past investment expenditures and adjusting them for the value of investment that has been used up (gross stocks) or adjusting them for the gradual wear and tear and the obsolescence they undergo during the time they are used (net stocks).

A comprehensive description of the perpetual inventory method is given in Fixed Capital Flows of the perpetual inventory method is given in Fixed Capital Flows and Stock - Manufacturing Canada 1926-1960: Methodology (13-522), Occasional.

The series are given by major industries according to the 1970 S.I.C., both in constant (1971) and current dollar valuation covering the following detailed types of components:

1. Building Construction
2. Engineering Construction
3. Machinery and Equipment
4. Capital Items Charged to Operating Expenses
5. Total Components

The component series are presented for the following categories of data:

1. Gross Fixed Capital Formation (GFCF)
2. Net Fixed Capital Formation (NFCF)
3. Capital Consumption Allowances (CCA)
4. Mid-Year Gross Stock (MYGS)
5. Mid-Year Net Stock (MYNS)
6. End Year Gross Stock (EYGS)
7. End Year Net Stock (EYNS)
8. Discards

Note: The mnemonics appearing at the end of the series title of some 650 series in the Capital Stocks data block, serve to identify the component series of the CANDIDE model which is an undertaking of the Economic Council of Canada.

B. Capacity Utilization Rates In Canadian Manufacturing, Quarterly (31-003)

The capacity utilization rates are given by major group according to the 1980 Standard Industrial Classification, by quarter from 1971.

The definition of capacity in this procedure is the maximum output obtainable under normal technological and market conditions.

The methodology used to produce these indexes is based on a comparison of the actual output of an industry during a certain time period with the estimated capacity output during that period.

The estimated capacity output is based on a capacity capital-output ratio derived from the industry's gross stock of fixed capital, measured in 1971 dollars. These capital stock estimates are produced by the National Wealth and Capital Stock Section of The Construction Division of Statistics Canada.

For concepts and detailed methodology, refer to Utilization Rates in Canadian Manufacturing, (31-003), Quarterly.

C. Capital And Repair Expenditures On Construction

Source: Construction in Canada, (64-201) Annual. This series provides annual estimates of capital and repair expenditures on construction, broken down by some 70 different structure types, cross-classified by province and sector. Included are final, preliminary, and forecast data.

For the most part the data are based on the Statistics Canada surveys of Capital Expenditures. From the same source, another publication Private and Public Investment, (61-205), Annual, reports the total capital and repair expenditure program, including outlays on machinery and equipment.

The matrices listed below contain series representing mid-year forecasts of capital expenditures. Repairs are not included since these data are not revised on our mid-year survey.

For information concerning our Actual, Preliminary Actual and Forecast data on CANSIM see Private and Public Investment in Canada, Intentions (61-205), Annual

The Canada matrices begin in 1956 with the following exceptions Mining (1192) - 1963, Government departments (1220) - 1968, Private and Public (1224) - 1968, Public (1228) - 1968.

The Provinces and Territories can be retrieved from 1968 (the first year these breakdowns were compiled). Beginning in 1977 these matrices also include data, split between the private and public categories.

For definitions and a brief description of the methods used to collect these data see Section V, Statistical Notes in the publication.

B. Computer Service Industry, (63-222), Annual

Data are presented for companies primarily engaged in the computer services industry. 1972 and 1973 data are comparable. In 1974 computer service companies were classified into two groups consisting of establishments primarily engaged in providing computer services and of establishments primarily engaged in sales and leasing or rental of EDP hardware.

The concepts and definitions used are available upon request from Services Division.

A. Population Projections for Canada, Provinces and Territories, 1984-2006, (91-520), Occasional

These are Statistics Canada's most recent population projections for Canada, the provinces and territories. They supersede the previous ones which were released in 1979. They are generated by the Statistics Canada Population Projection Model (SCPM) using different hypotheses regarding future trends in fertility, mortality, immigration, emigration and interprovincial migration. Five series are presented here, from Projection 1 to Projection 5; the base population is the 1983 estimated population by age and sex. More information about the general methodology and assumptions is given in Population Projections for Canada, Provinces and Territories, 1984-2006, (91-520), Occasional. Data by individual ages as well as components of growth are also contained in the Publication 91-520 as well as extensions of these projections at Canada level up to 2031.

In addition, Statistics Canada's projection model is capable of producing customized population, household and family projections and simulations based on user-specified input assumptions. Requests for special projections for either one or more specified spatial units, population groups or components of growth will be considered on a cost-recovery basis.

Further enquiries regarding the users' services for special population projections, the projection methodology and unpublished projection data may be addressed to Population Projections Section, Demography Division, Statistics Canada, Ottawa, K1A 0T6 (telephone (613) 990-9586).

B. 1. POPULATION, CENSUS DIVISIONS & SUBDIVISIONS (historical)*

The series comprises two tables. The first gives the population of the provinces and the territories back to 1901 Census as well as decennial increases. The second gives, for each Census taken since 1921, the population of the provinces, counties, census divisions, cities, towns, villages, municipalities and census subdivisions.

For a comprehensive description of boundary definitions pertinent to the census geographic areas tabulated refer to the source publications 1971 Census Catalogue 92-702, 1976 Census Catalogues 92-802, 92-803, 92-804, 92-805, and 1981 Census Catalogues 93-901 to 93-912.

Population, Intercensal Annual Estimates of Population by Sex and Age for Canada and Provinces, 1976-1981 (91-518), Occasional

Estimates of Population by Sex and Age, Canada, Provinces and Territories, June 1, (91-210), Annual

For each year other than census years, Statistics Canada publishes, in Catalogue 91-210, postcensal estimates of the population by age and sex as of June 1, which are calculated by the component method on the basis of the results of the preceding census. After each census, the postcensal estimates are revised to produce intercensal estimates (formerly called "revised estimates") which are consistent with the results of the censuses immediately preceding and following the year in question.

Principal statistics of the manufacturing industries in Québec, by major industrial group and sub-group, for Québec as a whole, annual data since 1961

Note : The classification used for these matrices is the revised Standard Industrial Classification Manual of 1970. In order to obtain consistent chronological series from 1961 to 1972, some sub-groups have been aggregated to form a total of 157 industrial sub-groups. SIC codes have been integrated to series number in all cases. Basic data were taken from the Census of Manufactures tapes provided by Statistics Canada.

CHEMICAL AND PETROCHEMICAL PLANT PRICE INDEXES, QUARTERLY AND ANNUALLY (1971=100)

CONSTRUCTION PRICE STATISTICS (62-007), STC

THIS INDEX MEASURES PRICE CHANGE FOR CONSTRUCTION OF A FLUID PROCESS PLANT OF THE SORT INSTALLED BY CHEMICAL AND PETROCHEMICAL COMPANIES. THE MODEL REPRESENTS A TYPICAL BATTERY LIMITS PLANT OF THE SORT INSTALLED IN EARLY 1970'S. INDEXES ARE CALCULATED QUARTERLY AND ARE AVAILABLE ABOUT TWO MONTHS AFTER THE REFERENCE PERIOD. THE MOST RECENT QUARTERLY INDEXES ARE SUBJECT TO REVISION. FOR FURTHER INFORMATION CONTACT PRICES DIVISION.

RETAIL SALES, CURRENT AND CONSTANT PRICE INDEXES (1981=100), MONTHLY

QUARTERLY ECONOMIC SUMMARY: STAT. SUPP.(CAT.13-007E)

THESE INDICATORS ARE CALCULATED BY DISAGGREGATING RETAIL TRADE BY KIND OF BUSINESS (CATALOGUE 63-005), BOTH RURAL AND SEASONALLY ADJUSTED, INTO COMMODITIES USING WEIGHTS BASED ON THE 1974 RETAIL COMMODITY SURVEY (CATALOGUE 63-526). NEW PASSENGER CAR AND TRUCK SALES ARE TAKEN FROM NEW MOTOR VEHICLES SALES (CATALOGUE 63-007). DEFLATION IS DONE BY COMMODITY USING MAINLY CPI INFORMATION (CATALOGUE 62-001).

GROSS NATIONAL EXPENDITURE IN CONSTANT (1971) DOLLARS, ANNUALLY FROM 1926 - MILLIONS OF DOLLARS

NATIONAL INCOME & EXPEND. ACCTS. STC 13-531 13-201

THE PERIOD 1926 TO PRESENT WAS DEFLATED IN FIVE TIME SEGMENTS, 1926-47, 1947-50, 1950-51, 1951-71 AND 1971 ON WITH PRICE INDEXES BASED ON 1935-39, 1949, 1957, 1961 AND 1971. THE FIVE SERIES WERE THEN LINKED TO 1971 BASE, THE LINKING PROCESS PRODUCED RESIDUAL DIFFERENCES BETWEEN THE LINKED GROUPS AND THE LINKED AGGREGATES. THESE DIFFERENCES ARE SHOWN IN THIS MATRIX AS ADJUSTING ENTRIES.

GROSS NATIONAL EXPENDITURE IN CONSTANT (1961) DOLLARS, ANNUALLY, FROM 1926, IN MILLIONS OF DOLLARS			
NATIONAL INCOME & EXPEND. ACCTS. STC 13-531 TAB. 6A			

THE PERIOD 1926-1968 WAS DEFLATED IN FOUR TIME SEGMENTS, 1926-1947, 1947-1956, 1956-1961 AND 1961-1968 WITH PRICE INDEXES BASED ON 1935-39, 1949-53, 1961-65 AND 1965-68 RESPECTIVELY. THE FOUR SERIES WERE THEN LINKED ARITHMETICALLY AT THE MAJOR GROUP, COMPONENT AND TOTAL G.W.E. LEVELS TO 1961 BASE. THE LINKING PROCESS PRODUCED RESIDUAL DIFFERENCES BETWEEN SUM OF THE LINKED GROUPS AND THE LINKED AGGREGATES. THESE DIFFERENCES ARE SHOWN IN THIS MATRIX AS ADJUSTING ENTRIES.

THE SHARP DROP NOTED IN SOME SERIES IN 1961 IS DUE TO THE TRANSFER OF NON-PROFIT HOSPITALS FROM THE PERSONAL SECTOR TO THE GOVERNMENT SECTOR. THUS, HOSPITAL EXPENDITURES ARE INCLUDED IN GOVERNMENT EXPENDITURES. HOWEVER, EXPENSES CHARGED DIRECTLY TO PERSONS, SUCH AS CHARGES FOR PREFERENTIAL ACCOMMODATION, REMAIN AN ITEM OF PERSONAL EXPENDITURE.
